## 4100 Series

## Electromechanical Rotary Motion Control Switches

Reduce downtime, protect expensive equipment and safeguard operations.

| 4100 Series |  |
| :---: | :---: |

| Wiring Contact Options | SPDT, DPDT, SPDT(2) |
| Weight | $\begin{aligned} & \text { AL - } 4 \text { lbs. (1.81 kg) } \\ & \text { Cl - } 8 \text { lbs. (3.63 kg) } \end{aligned}$ |

## Stop an entire operation if one machine fails.

 Designed to handle shaft-end pressure associated withV-belt, sprocket, roller wheel or chain drive mechanisms.
No electrical input required.

DAZIC® Zero Speed Switches monitor the rotary motion of equipment when interlocked as part of a conveyor system, or other shaft-driven process components. The switches ensure that if one machine deviates or fails, the switch will:

- Actuate a signal or alarm device
- Break a circuit to a motor
- Make a circuit to start auxiliary equipment
- Make or break a circuit to other electrical devices
- Signal a control station or PLC

When driven from a critical shaft, a Zero Speed Switch will engage when a system's normal operating speed:

- Stops due to mechanical failure
- Slows down due to overload
- Changes due to normal machine cycling
- Begins to overspeed
- Reverses rotation

Zero Speed Switches should be mounted to idler pulleys or tail shaft to sense

## Mounting Style:

Switches can be mounted in any position but they must be aligned and concentric with the corresponding drive shaft.

4100 Series Zero Speed Switches are available with only the Type B - Base Mount.

## Electrical Wiring Options:

## SPDT

Single Pole, Double Throw

DPDT
Double Pole, Double Throw

SPDT(2)
Direction Indicating

## How to order:

Housing Material - Model No. - Mounting Style
(AL or CI) 41xx-xx (B)
For example:
Model 4120-1 with Cast Iron housing and Base mount = CI-4120-1-B

## DAZIC@ 4100 Series Installation Accessories

Speed Switch devices coupled to a corresponding shaft, must be properly mounted and aligned to avoid putting extra load on motor bearings, which may cause premature failure. The use of installation accessories such as Mounting Brackets and K-Couplings provide a secure foundation and eliminate misalignment connection problems.

When ordering Mounting Brackets, please specify Model MB-1 for 4100 Series Zero Speed Switches.

## K-Couplings

The K-Coupling ${ }^{\circledR}$ is made of double-loop ELASTACAST ${ }^{\circledR}$ polyurethane elastomeric material assembled to zinc plated steel hubs, which mount to shafts using Allen screws. Motor noise and vibration will be dampened. Bearings will last longer and require less maintenance.

When ordering, make sure the torque requirement is within rating limits, and always include the bore size for both ends of the coupling, which may not be the same. Example: 5801 1/4" x 5/16"

## Notes:

- Bore tolerances are AGMA Class 2-000 + . 002
- All standard coupling hubs are zinc plated steel

Keyways may be obtained on Series 5803 and 5804 couplings for an additional cost.
Standard keyways are: $1 / 8^{\prime \prime}$ for $1 / 2^{\prime \prime}$ dia. shaft; $3 / 16$ " for $9 / 16$ " and $5 / 8 "$ dia. shafts
