

# Ultrasonic level measuring device

- For level measurement up to 8 m
- 4...20 mA/HART 2 wires •
- Suitable for solids •
- ATEX certification

Product variants described in the data sheet may differ from the product presentation and description.

#### Can be combined with

Type 8611 eCONTROL - Universal controller

# AirLINE Type 8793

ic Process Controller

# Type 8802

Type description

The type 8177 is a non-contact ultrasonic level measuring device, designed for continuous level measurement in open or closed vessels.

The unit is suitable for liquids, but also for solids, in virtually all industries, particularly in water and waste water management.

# 1. General technical data

Product properties				
Material				
	s are compatible with the fluid you are using.			
	chapter "3.1. Chemical Resistance Chart – Bürkert resistApp" on page 5.			
Non wetted parts				
Housing	PBT, stainless steel 316L (1.4404)			
Cover	PC transparent			
Seal between housing and cover	EPDM			
Cable gland	PA			
Blind plug	PA			
Ground terminal	Stainless steel 316Ti/316L (1.4571/1.4435)			
Wetted parts				
Process connection	PVDF			
Transducer	PVDF			
Process seal	EPDM			
Dimensions	Detailed information can be found in chapter "4. Dimensions" on page 6.			
Weights	1.84 kg (depending on process connection and housing)			
Measuring variable	Distance between lower edge of the transducer and product surface. Detailed information			
5	can be found in chapters "5.1. Measurement deviation diagram" on page 7.			
Measuring range	• 0.48 m (for liquids)			
	• 0.43.5 m (for solids)			
Beam angle <sup>1.)</sup>	11°			
Damping (63 % of the input value)	0999 s, adjustable			
Adjustment time <sup>2.)</sup>	>3 s (dependent on the parameter adjustment)			
Dreduct concerning

# 2. Approvals

# 2.1. ATEX-Certification

#### Note:

Devices with Ex certification have different technical data, see Supplement ATEX Type 8177 > under user manual.

Certificate	Description
$\sqrt{c}$	EU-Type Examination Certificate Number: PTB 07 ATEX 2003X
$\langle z x \rangle$	ATEX II 1/2G resp. II 2G EEx ia IIC T6
	Measures to comply with ATEX requirements: refer to the <b>Supplement ATEX Type 8177</b> Inder user manual. The Ex. certification is only valid if the Bürkert device is used as described in the supplement ATEX. If unauthor- ized changes are made to the device, the Ex. certification becomes invalid.

# 4. Dimensions

#### Note:

Dimensions in mm

Visit product website >

# 6. Product operation

#### 6.1. Measuring principle

The transducer of the ultrasonic measuring device emits short ultrasonic pulses, at 55 kHz to the measured product. These pulses are reflected by the medium surface and received by the transducer as echoes. The running time of the ultrasonic pulses from emission to reception is proportional to the distance and hence to the level. An integrated temperature sensor detects the temperature in the vessel and compensates the influence of temperature on the signal running time. The determined level is converted into an output signal and transmitted as a measured value.

# 6.2. Product operation notes

#### Set up with display/configuration module

The measuring device is adjusted with the display/configuration module. The entered parameters are generally saved in the measuring device, Type 8177. Optionally, parameters may also be uploaded and downloaded with the display/configuration module.
